

Acqua Drill Resources' Environment policy sets our commitment to continually improve our environmental performance to manage our activities and to minimise harm to our workplaces, our clients, and the broader community.

We choose to demonstrate due diligence in the management of our operations, consistent with our legal obligations and the principles of ISO 14001 (Environmental Management Systems) and ecologically sustainable development. Our environmental objectives are to:

- Comply with applicable environmental legal requirements.
- Work to minimise noise, dust and air emissions from our drilling and maintenance operations.
- Minimise energy use, greenhouse emissions, water use, waste generation, consumables and where possible to reduce our environmental footprint.
- Eliminate or manage any hydrocarbon, chemical or other substance spill events.
- Return each site to a safe condition with environmental, heritage and conservation values intact.

To achieve these objectives, we will, within our scope of responsibilities:

- Develop and implement environmental management plans.
- Design, operate and de-commission any facility or associated infrastructure to minimise adverse environmental impacts.
- Provide instruction, awareness, and training to our employees so they recognise, manage and monitor the impacts of their activities.

We want to contribute, where possible, to ongoing sustainability and of a low-risk future, wherever we touch the environment.
